1
The published table shows 169,794 males aged 5-10 in 1832, but the population count should be 168,794 in order to sum correctly to the total of both sexes aged 5-10 and the total for all ages, and to match the average population for 1831-35 shown earlier in the table. Corrected gross error and input corrected value.

2
RefCode 21 has death records for 5-year age groups for years 1751-1860, 1863, 1865, 1868 and 1870.
RefCode 22 has death records for 1-year age groups for years 1861-1900. The two updates yield inconsistent number of deaths in year 1863, 1865, 1868 and 1870. It's likely because in RefCode 21 deaths at unknown age have already been redistributed across age.

3
RefCode 22 has death records for 1-year age groups for years 1861-1900.
RefCode 24 has lexis triangle deaths data for age above 50 for year 1895 – 1900.
Using both 22 and 24 matches total number of deaths for year 1895 – 1900 in current statistical records.
